White Lion Technologies AG conducts research in imaging, image processing, software, and embedded systems. On the one hand we develop custom soft- and hardware solutions. Our other focus is research regarding novel 3D X-ray tomography devices, image reconstruction, as well as real-time navigation systems.
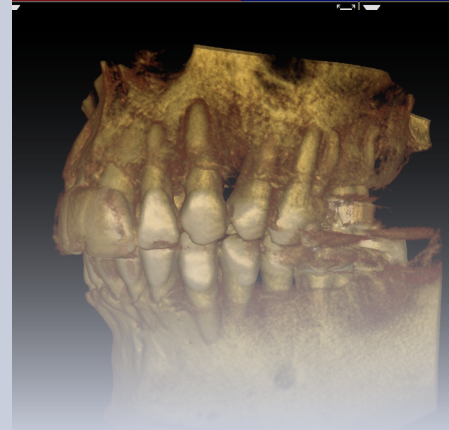

Applications
- **High resolution 3D Visualization**
- **3D image reconstruction for medical applications and nondestructive testing (NDT)**
- **Stereoscopic tracking systems for real-time navigation**
- **High-end, zero-configuration embedded systems**

Technologies
- **GPU-based image pricessing and algorithms**
- **C++ und OpenGL**
- **Multi-touch interfaces**
- **Windows, Linux, VxWorks**
- **Continuous integration**

Outlook

White Lion Technologies develops "zero configuration" turnkey solutions. Our vertical integration supports you on all levels
- Scientists support you in applying and developing novel technologies
- Skilled developers consequently implement and adjust the software to leverage the power of multi-core CPU and many-core GPU technologies
- Product designers develop a consistent package and simplify the operation of complex applications
